SEO audit

94/100

- **Heading structure** — Heading levels are skipped 2 times (for example H2 straight to H4).
- **Social sharing tags** — Open Graph tags are incomplete (title or image missing).

15 other checks passed.

Speed and page weight

C 71/100

Response	HTML size	Scripts	Images	Other domains
88 ms	35 KB	1	8	2

- **Compression** — The HTML is sent uncompressed. Gzip or Brotli usually cut it by 70% or more.
- **Image dimensions** — 5 images have no width and height, which makes the layout shift as they load.
- **Lazy-loaded images** — 0 of 8 images load only when scrolled into view.
- **Modern image formats** — 8 images are JPEG, PNG or GIF. WebP or AVIF are usually 25 to 50% smaller.
- **HTTP/2 or newer** — Served over HTTP/1.1. HTTP/2 loads many files at once over one connection.

6 other checks passed.

Security

Grade A 90/100

- **HSTS** — No Strict-Transport-Security header, so a first visit over plain HTTP can be intercepted.
- **Software versions hidden** — Headers reveal exact versions (server: Apache/2.4.62 (AlmaLinux) OpenSSL/3.5.8), which helps attackers find known weaknesses.
- **security.txt** — No /.well-known/security.txt telling researchers how to report problems.
- **DNSSEC** — DNS records are not signed (DNSSEC off), so they can be spoofed.

9 other checks passed.

Privacy and trackers

Low tracking

Evidence

AI signals (2)

Frequent "X, Y, and Z" lists (16.5 per 1,000 words)
Groups of three are a strong stylistic habit of language models.

Uniform sentence rhythm (low burstiness)
Sentence lengths in paragraphs barely vary (variation 0.29, avg 22.4 words). Human prose is usually "burstier".

About this result

AI detection is probabilistic. This report is based on signals the site exposes publicly (code, metadata, text patterns, images). It cannot see a site's development history, and well-edited AI work can look human-made. Use the result as an indication, not proof.
